

How My SmileGuideU Works

My SmileGuideU is a secure, personalized, and interactive online tool for improving oral health awareness. My SmileGuideU contains a library of age related concerns known to impact oral health. Teens, adults and seniors can “self-assess” for concerns that can affect their oral health and for family members.

1. You complete a registration form with your information or that of someone in your care. This process creates your (their) personal health folder
2. Based upon the registration, My SmileGuideU selects age and gender specific questions from its library and presents these questions in your (their) health folder
3. Based upon your response to each question, predetermined health guidance is given to improve health awareness, empower healthy choices, improve oral health, seek timely preventive dental care or dental care for a problem
4. All of the health guidance is saved in an Oral Health Report and a Smile Score is provided
5. To gain more value from dental check-ups, The *Dental Visit Checklist* is provided in the health folder
6. A Satisfaction Survey is in the health folder to gain feedback
7. You can access My SmileGuideU 24/7 from any internet portal or PDA

You go as your smile goes!!
